Sixty four PRO polypeptides, useful in the diagnosis and treatment of immune related disorders, e.g. systemic lupus erythematosis, rheumatoid arthritis, osteoarthritis, thyroiditis and diabetes mellitus

Claim 23; Fig 1; 309pp; English.

The present invention describes sixty four human PRO proteins which can be used in the treatment of immune related diseases. The human PRO proteins, anti-PRO antibodies, agonists and antagonists are useful for treating and diagnosing immune related disorders. The disorders are selected from systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis, spondyloarthropathies, systemic sclerosis, idiopathic inflammatory myopathies, sjogram's systemic vasculitis, sarcoidosis, autoimmune haemolytic anaemia, autoimmune thrombooytopaenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, hepatobiliary diseases of the central and peripheral nervous systems, hepatobiliary diseases, inflammatory own peripheral nervous systems, hepatobiliary diseases, inflammatory of immune or immune-mediated skin diseases, allergic diseases, autoimmune or immune-mediated skin diseases, allergic diseases, incombing graft relection and graft-versus-host-disease.

Immunological diseases of the lung, and transplantation associated diseases including graft relection and graft-versus-host-disease.

AAC58377 to AAC58378 represent PCR primers and hybridisation probes used in the isolation of human PRO sequences. AAC58579 to AAC58422 and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes nucleic acids encoding PRO polypeptides useful for preventing, diagnosing and treating diagnosing a cardiovascular, endothelial or angiogenic disorder in mammals by modulating cell proliferation, angiogenesis and cardiovascularisation, and for identifying agonists and antagonists of these processes. The nucleic acids and the proteins they encode may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate PRO expression such as cardiovascular, endothelial or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gerber H, Hillan KJ, Goddard A;

AASIJISIA -AASIJISIA encode tor novel numen secretory and transmembrane PRO polypeptides. The PRO polypeptides are useful to detect other PRO polypeptides, to link bioactive molecules to cells expressing PRO polypeptides, to medulate biological activities of cells expressing PRO polypeptides, and to detect the presence of mammalian lung, colon, breast, prostate, rectal, cervical or liver tumours by comparing PRO polypeptide expression in a cell sample to that in a control sample. Some of the 275 sequences are also useful to stimulate the release of tumour necrosis factor-alpha (TMF-alpha) from human blood, the proliferation or differentiation of chondrocytes, the proliferation of chondrocytes, the proliferation of a cytokine from peripheral blood of T-lymphocytes, the release of a cytokine from peripheral blood the PRO polypeptides may modulate glucose or free fatty acid uptake by skeletal muscle cells or by adipocytes; or inhibit binding of A-peptide coffactor VIIA. The PRO polypeptides can be used in assays to identify molecules involved in binding interactions. The polymucleotides encoding PRO polypeptides can be used to generate probes, antisense RNA/DNA, transgenic or knock out animals and can be used in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             489
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      601

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is one of seventeen nucleic acids encoding PRO polypeptides, agonists and antagonists are useful for treating cardiovascular, endothelial or antigonists are useful for treating cardiovascular, endothelial or angiogenic disorders in a mammal. Examples of these disorders include cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atheroscelerosis, hypertension, arterial restensors, Raymaud's disease, rheumatoid arthritis, angina, myocardial infarctions, thrombophlebitis and lymphangitis. The PRO polypeptides and antagonists are also used to prevent tumour angiogenesis and for treating periodontal diseases. They are also used to stimulate wound healing and tissue regeneration. The PRO nucleic acids, polypeptides and anti-PRO antibodies are useful for diagnosing a cardiovascular, endothelial or angiogenic disorder.

The present invention discloses the coding and protein sequences of human
                         proteins PRO526, PRO719, PRO725, PRO1031 and PRO200. These proteins, their coding sequences and antibodies can be used in the treatment of immune-related diseases, including systemic lupus erythematosus, rheumatoid arthritis, thyroiditis, immune-mediated renal disease, demyelinating diseases such as multiple sclerosis, hepatobiliary diseases including primary biliary cirrhosis, inflammarcry bowel diseases, including asthma, immuno-dogic diseases including asthma, immunologic diseases of the lung, transplantation associated diseases and infectious diseases such as RIV and hepatitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           309
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        181

Claim 58; Fig 21A-B; 293pp; English.

The invention letates to mover numen auglosquestreas processing designated PRO proteins (AABS)064-851097), and to nucleic acids encoding PRO proteins (AABS)064-851097), and to nucleic acids encoding PRO proteins. The invention also relates to vectors and host cells comprising a PRO nucleic acid, the recombinant production of a PRO protein, from antibodies specific for a PRO protein, fusion proteins compounds which inhibit the expression of a PRO gene. The invention additionally encompasses methods of identifying modulators of PRO expression or activity; diagnosing a cardiovascular, endothelial or angiogenic disorder, or a susceptibility to such a disorder by detecting mutations in a PRO gene, or the expression level of a PRO gene within a particular tissue; treating a cardiovascular, endothelial or angiogenic disorder or an endothelial or angiogenic disorder or an endothelial or angiogenic or an endothelial or angiogenist or antagonist a retroviral gene therapy vector comprising compounts or and methods of inhibiting or stimulating endothelial or PRO agonist or and methods of inhibiting or stimulating endothelial or administration of a PRO protein, and methods of inhibiting or stimulating endothelial or administration of a PRO protein, and methods of inhibiting or stimulating endothelial or administration of a PRO protein, and administration of a PRO proteins, and administration of a PRO proteins, and admerioals, ulcers, wounds, cancer, Alzheimer's disease, Huntington's endometrioais, ulcers, wounds, cancer, Alzheimer's disease, produced angiogenic disease, or stroke. PRO proteins, are additionally useful in the recombinant production of PRO proteins, as and appeare encoding PRO proteins, to analyse genet to produce transgenic company. PRO nucleic acids and also be used to produce transgenic c invention relates to novel human angiogenesis-associated proteins protein of the invention.

The present invention relates to the isolation of novel human PRO polypeptides, and the polymucleotide sequences encoding them. The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides are useful for detecting other PRO polypeptides, for inking bloactive molecules to cells expressing PRO polypeptides, for for modulating biological activities of cells expressing PRO polypeptides, for identifying agonists or antagonists.

The PRO polypeptides are useful for for stimulating the release of tumour necrosis factor (TNF)-alpha from human blood, for stimulating the proliferation or differentiation of chondrocytes, and detecting the presence of tumours. The polymuclectide sequences encoding PRO polypeptides are useful as hybridiaation probes, in chromosome and gene mapping, in the generation of antisense RNA and DNA, in the preparation of PRO polypeptides, for generating transgenic animals or knockout animals, for the generation analysis of individuals with genetic disorders, and in gene therapy, ACA0360-ACA03877 represent cDNAs encoding the human PRO polypeptides of the invention.

Note: The sequence data for this patent was obtained in electronic format directly from the property.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AATTCCAGTTTTCCAGCAACAAGGAACAGAACGGAGTACAAGATCCTCAGCATGAGAA 181

P-PSDB; ABU66988.

When secreted and transmembrane nucleic acids and polypeptides, designated as FPO; useful for treating inflammation, organ failure, atherosolerosis, cardiac injury, infertility, birth defects, premature approacherosis, cardiac injury, infertility, birth defects, premature approacherosis, cardiac contact of the International Contact of Contact Secreted or transmembrane proteins). The nucleic acid further comprises the full-length coding sequence of the DNA deposited under American Type Culture Collection (ArCC) accession number in a list given in the specification. Also included are vectors and host contact of proteins, PRO proteins, PRO conting PRO proteins, PRO continged are vectors and host of the proliferation of deferentiation of chondrocyte cells, the rolleration of deferentiation of chondrocyte cells, the proliferation of differentiation of chondrocyte cells, the proliferation of deferentiation of chondrocyte cells, the proliferation of deferentiation of chondrocyte cells, the proliferation of deferentiation of chondrocyte cells, the proliferation of any period of monourclear cells, the release of a cyclokine from peripheral blood monourclear cells, the release of a cyclokine from peripheral blood monourclear cells, the release of a cyclokine from peripheral blood monourclear cells, the companied of the proliferation of adapted of monourclear cells, a method for mobile of adapted of a the differentiation of adapted of a method for mobile of adapted of a the differentiation of adapted of a cyclokine from peripheral pero

The nucleic acids and polypeptides are useful for treating inflammatory diseases, organ failure, atherosclerosis, cardiac injury, infertility, birth defects, premature aging, AIDS (acquired immunodeficiency syndrome), cancer, or diabetic complications. The nucleic acids are useful as hybridisation probes, in chromosome and gene mapping, and in generating antisense RNA or DNA. The polypeptides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. Both are useful in tissue typing.

The present sequence encodes a PRO protein of the invention. 2 CCCGCCGTGAGTGAGCTCTCACCCCAGTCAGCCCAAATGAGCCTCTTCGGGCTTCTCCTGG 62 TGACATCTGCCCTGGCCGGCCAGAGACGAGGACTCAGGCGGAATCCAACCTGAGTAGTA TTATTACTGTGTCTACTAATGGAAGTATTCACAGGCCCAAGGTTTCCTCATACTTATCCAA GAAATACGGTCTTGGTATGGGAGATTAGTAGCAGTAGAGGAAAATGTATGGATACAACTTA 550 CGTTTGATGAAGATTTGGGCTTGAAGACCCAGAAGATGACATATGCAAGTATGATTTTG TAGAAGTTGAGGAACCCAGTGATGGAACTATATTAGGGCGCTGGTGTGGTTCTGGTACTG 730 ATTTTCCTTCTGAACCAGGGTTCTGCATCCACTACAACATTGTCATGCCACAATTCACAG AAGCTGTGAGTCCTTCAGTGCTACCCCCTTCAGCTTTGCCACTGGACCTGCTTAATAATG CTATAACTGCCTTTAGTACCTTGGAAGACCTTATTCGATATCTTGAACCAGAGAGATGGC GAAATACGGTCTTGGTATGGAGATTAGTAGCAGTAGAGGAAAATGTATGGATACAACTTA 610 TAGAAGTTGAGGAACCCAGTGATGGAACTATATTAGGGCGCTGGTGTGGTTCTGGTACTG **TACCAGGAAAACAGATTTCTAAAGGAAATCAAATTAGGATAAGATTTGTATCTGATGAAT** 670 TACCAGGAAAACAGATTTCTAAAGGAAATCAAATTAGGATAAGATTTGTATCTGATGAAT ATTITICCTTCTGAACCAGGGTTCTGCATCCACTACAACATTGTCATGCCACAATTCACAG 910 AGTTGGACTTAGAAGATCTATATAGGCCAACTTGGCAACTTCTTGGCAAGGCTTTTGTTT 36; Indels 11; Gaps Query Match 93.9%; Score 1979.4; DB 25; Length 2849; Best Local Similarity 97.7%; Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       487,
